

# Wooden Camera Housing

for USB and Board cameras

## Solid wood camera housing machined from a single block.

This is a wooden camera housing designed to accommodate USB cameras and board cameras.

Its natural material allows it to blend seamlessly into interiors such as offices, public facilities, hotel lobbies, and private studies.

## Precision-Crafted from Walnut or Oak

Unlike cases made from plywood or laminated panels, this wooden camera housing is carved from a single block of genuine solid wood.

Each unit is carefully milled and finished to highlight the natural beauty and tactile warmth of the material. The result is a product that stands apart from mass-produced plastic enclosures or cold industrial designs, offering both elegance and authenticity.

## Manufacturer-specific Sets

We also offer an integration kit compatible with commonly available USB cameras and board cameras from various manufacturers.

The kit is an all-in-one set that includes a camera mounting plate, spacers, and internal cables for easy installation.

## Accessories

### Camera cable for use inside a housing

This cable is used to connect the camera inside the housing.

A power-supply type is also available for providing power to an internal cooling fan.
